

We have as many as 7 modules in the ERP. The detailed list of modules along with its features is given hereunder. You could take as many modules and as and when you want. In order to get a complete picture of your organization, we have the Trips module, Accounting module and Payroll module, etc. The system will also take care of your "inventory", Accounts is integrated from day one. In other words, you take only the modules that is required.

The cost of the ERP will depend on the number of modules you need and the level of customization.

We can have an online demo of our software after which we can discuss what are all the modules required by you and then take it forward from there. Developed in Visual Basic (VB 6) with MS SQL 2000 Server database as backend RDBMS and runs on platform MS Windows 2003 Server OS. MS Excel integration allows user to get report automatically as MS Excel spreadsheets. Professional reports can also be generated in crystal reports with graphical presentation by way of a pie chart.

Our USP is extensive training, handholding and customization.

DNS Software can also handle multi location.

Last but not the least, *DNS* has been chosen as “Software Partner” by Intel Corporation.

We can have a demo of our software after which we can discuss what are all the modules required by you and then take it forward from there.

DNS – ERP FOR TOURS & TRAVEL
